ACKNOWLEDGEMENT

My dedicated supervisor, Miss Nurulhuda binti Ahamad has been the pillar throughout the process of my research. Hence, I would like to express my sincere gratitude to her for being responsive to my questions, provide useful guidelines and advices upon necessary, and holding on to the patience for leading me.

Thus, I would like to thank my examiners, Sr. Masidah Binti Abdul Majid and Mr. Kong Sio Kah from the bottom of my heart. Comprehensive advices and constructive feedback have been given by them for the research projects, which is leading me to the right path for the research.

Besides, I would like to express my sincere gratitude to the respondents who spend their valuable time to provide fully cooperation in the dissertation. Hence, the opinion provided by them are invaluable and they had widened my knowledge world with the construction industry real-time experiences.

Lastly, I would like to thank my beloved family members and friends, who are constantly encouraging and supporting me for this research. In additions, they have lent their helping hand to me while I have encounter issues in the process of completing this dissertation.

DECLARATION BY THE CANDIDATE

I Thoo Yuan Leng, I16010349 confirm that the work in this report is my own work and the appropriate credit has been given where the references have made to the work of other researchers.

Student Name : Thoo Yuan Leng

Student ID : I16010349

Date : 7/4/2020

ABSTRACT

Time overrun has been one of the major issues faced by the construction industry in Malaysia for the recent time being. Construction task has been executed in a slow manner as traditional method is being practiced and human being are being employed carry out those tasks. However, a series of technologies have been invented and being implemented in the construction industry in order to save time required for each construction task. In such a case, one of the newly implemented technology, Unmanned Aerial Vehicles (UAV) will be discuss and identify effect of its implementation towards time overrun issues. The project title for this dissertation is named The Application of Unmanned Aerial Vehicles (UAV) in Alleviating Time Overrun issues in the Construction Industry. The aim of this dissertation is to identify recognize UAV implementation does alleviate delay that lead to time overrun in the construction project. Data is collected from six respondents by using qualitative method as the number of UAV applicants in construction industry is limited. The targeted respondent for the study is G7 contractor who is financially capable to employ such technology in Selangor area. Thus, data collected will be coded and tabulated for data analyzation purposes. Content analysis is being employed to analyze data collected in the dissertation. Hence, the findings are showing the functions of UAV and those functions that can be implemented in the construction industry. In addition, the adoption level of UAV in the construction industry at the current moment is being scrutinize in the study. Although UAV implementation is increasing the efficiency and effectiveness in carrying out construction task, the results reveal the possibility of UAV implementation in lessen time overrun issues is low. The respondents did clarify that UAV is being employed as a tool in the construction industry.

ABSTRACT	III
List of Table	VIII
List of Figure	X
List of Abbreviation	XI
List of Appendices	XI
Chapter 1 Introduction	1
1.1 Background of study	1
1.2 Problem Statement	3
1.3 Research Goal	6
1.3.1 Research Aim	6
1.3.2 Objectives	6
1.3.3 Key Questions	6
1.4 Significance of the study	7
1.5 Proposed Research Methodology	9
1. 6 Limitation of the study	12
1.7 Propose content of each chapter	14
1.8 Expected Findings	16
Chapter 2 Literature Review	17
2.1 Introduction	17
2.2 Unmanned Aerial Vehicles (UAV)	19
2.2.1 UAV Terms and History	19
2.2.2 Classification of UAV	20
2.2.3 UAV Hardware	26
2.2.4 Applications of UAV in each Industries	32

2.2.5 UAV in Construction Industry	35
2.2.6 UAV Challenges	37
2.2.6.1 Technological gaps	37
2.2.6.2 Controlling bodies and Regulations	38
2.2.6.3 Safety, Privacy and Security Issues	39
2.3 Time overrun	41
2.3.1 Time overrun overview	41
2.3.2 Factors that lead to time overrun in construction projects	43
2.4 The adoption level of UAV in enhancing time overrun issues in Construction Industry	47
2.4.1 Site Monitoring & Progression tracking	48
2.4.2 Communication and management	49
2.4.3 Site inspection	50
2.4.4 Volumetric Estimation	51
2.4.5 Overlap with BIM	55
2.5 Conclusion	57
Chapter 3 Research Methodology	59
3.1 Introduction	59
3.2 Research Methodology Framework	60
3.3.1 Primary Data	63
3.3.2 Secondary Data	63
3.4 Research Design	64
3.5 Data Collection	66
3.5.1 Interview Method	66
3.5.2 Sampling Method	67
3.5.3 Interview Style	69
3.5.4 Interview Type	69
3.6 Data Analysis	70

3.6.1 Content Analysis	70
3.6.2 Procedural Model of Structuring Content Analysis	73
3.7 Conclusion	76
Chapter 4 Data Analysis	77
4.1 Introduction	77
4.2 Interview Candidates	78
4.2.1 Designation of Respondents	79
4.2.2 Age of Respondents	80
4.2.3 Respondents' Construction Industry Experience	81
4.2.4 Respondents' UAV Experience	82
4.3 UAV-Implemented Projects	83
4.3.1 UAV Functions	84
4.4 The adoption level of UAV in Construction Industry	86
4.4.1 UAV-aided tasks in the Construction stage	87
4.4.1.1 Respondent A	88
4.4.1.2 Respondent B	90
4.4.1.3 Respondent C	92
4.4.1.4 Respondent D	93
4.4.1.5 Respondent E	94
4.4.1.6 Respondent F	95
4.4.2 Frequency of Tasks being carried out by Using UAV	98
4.4.3 Way for Operating UAV	100
4.5 Impacts on Projects after Implementation of UAV	102
4.5.1 Time Taken to perform Construction Tasks: UAV vs Traditional Method	103
4.5.2 Absence of UAV lead to Project Time Overrun	105
4.5.3 Implementation of UAV replaced Traditional Method	106
4.6 Concluding Remark	107

Chapter 5 Conclusion	112
5.1 Introduction	112
5.2 Summary of Findings	112
5.2.1 Objective 1: To understand the functions of UAV which is applicable in the construction industry	112
5.2.2 Objective 2: To assess the adoption level of UAV application in the construction industry	113
5.2.3 Objective 3: To identify the impact of implementation of UAV towards time overrun issues in construction industry	115
5.3 Research Limitations	115
5.4 Recommendations for Continuation Research	116
5.5 Conclusion	116
6.0 References and Bibliography	117

Chapter 1

Introduction

1.1 Background of study

Construction sector is one of the major key drivers for the economics of Malaysia which contribute significantly towards the economic growth of the country. The construction industry has continuously contributing towards the national Gross Domestic Product at the rate of 3-5% for the past 20 years. It is playing a central role in driving economic growth and socio-economic due to its growth-initiating and growth-dependent nature (N A Mirawati, Othman and Risyawati, 2015). Completion on time for construction project is a significant parameter for a successful construction project (Ullah *et al.*, 2018).

However, delay is one of the frequent phenomena that rampant across the world in the construction projects which lead to time overrun in construction projects (Hasmori *et al.*, 2018; Ullah *et al.*, 2018). Time overrun is defined as completion of a project is exceeding its planned time, or project completion date is beyond the date that has been written in the contract (Rafieizonooz *et al.*, 2016). Thus, it will bring a series of negative impact to the project and the participating parties. Time overrun is often associated with additional cost of a project, such as direct, indirect and impact cost due to delay of completion (Hasmori *et al.*, 2018).

Time overrun is initiated with a few factors, which are project management and contract administration, contractor site management, material and machineries resource, in accurate evaluation of projects, labor supply, lack of communication between parties and mistakes during construction stage, and poor decision making (Sambasivan and Soon, 2007; Othman, Shafiq and Nuruddin, 2018). One of the new technologies that can be implemented in the construction industry to allay time overrun issue is Unmanned Aerial Vehicles (UAV).
